

## DESCRIPTION

The electronic housing is realized for connections up to 12 poles. The housing is designed to accept our **ML25-D/S-LC** terminal blocks granting a wire section of 2,5sqmm.

The wide inner space allows the use and mounting of a high number of electronic components.

Special versions with closed holes are available on request. They allow the possibility to reduce the number of connections to 3, 6 or 9 poles maintaining a complete protection of inner components. It is also possible to reduce the number of connections thanks to the closing accessory **TP35 / TG35**. Simply insert this accessory into the hole you need to close before inserting the board.

Special colours, modifications on upper cover and imprints are available on request.
